Simple Design QA - Quick How-To

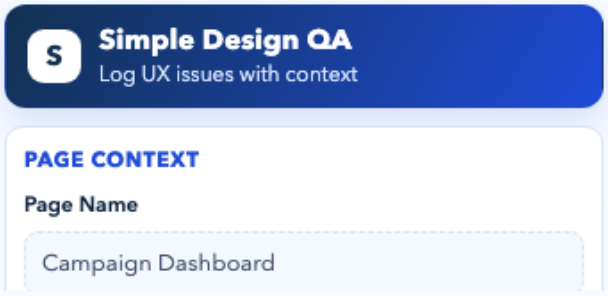
Capture UX feedback and export issue logs as ZIP

WORKFLOW

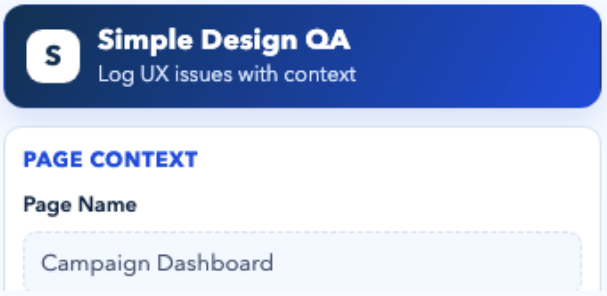
1. Open your app screen and click the **Simple Design QA** extension icon.
2. Confirm auto-filled context: **Page Name**, **URL**, and **Timestamp**.
3. Select severity using the **radio buttons** and choose **Feedback Type**.
4. Enter a clear issue description in **Feedback**.
5. Optional: click **Pick Area** and select the on-page container where the issue appears.
6. Optional: add a **Suggested Reference Link** (plain domains are accepted).
7. Click **Save** for each issue.
8. Use **View Logs** for filter/search/delete and image preview.
9. Click **Export SDQA ZIP** at end of QA to generate HTML + CSV + screenshots.

TIPS

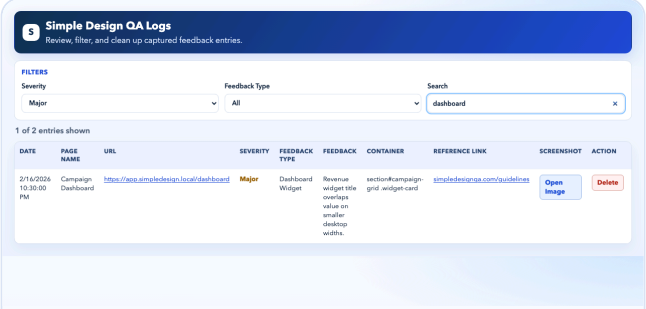
Unsaved feedback is preserved when you close and reopen the popup on the same page. The draft clears after save or when you open a different URL. Export creates a folder named **SDQA_YYYY-MM-DD_HH-mm** containing `sdqa-logs.html`, `sdqa-logs.csv`, and screenshot files.



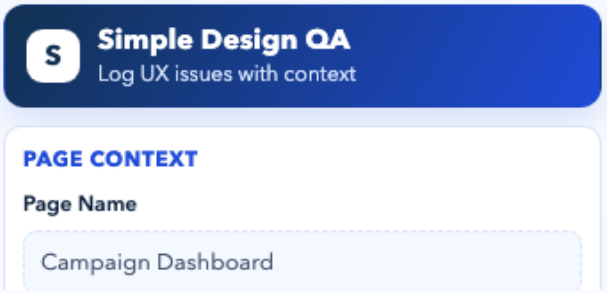
1) Filled popup ready to save



2) Container pinpoint captured



3) Logs view with filters and table



4) CSV export status confirmation

Generated from the extension source in `apps/simple-design-qa`.
